DISC AND SHEET MEMBRANES

DISC AND SHEET MEMBRANES

Cellulose Acetate (CA) Membrane

GVS Cellulose Acetate (CA) Filtration Membrane is a supported, hydrophilic membrane that is naturally low binding. It is ideal for use in filtration applications where maximal recovery of protein is critical.

Exceptional Strength for Improved Performance

GVS CA Filtration membranes are composed of pure cellulose acetate that is internally supported by an inert polyester web. This web gives each membrane exceptional strength to prevent cracking, tearing, breaking and distortion when handled or creased. The resulting membrane has dimensional stability that can withstand autoclaving or steam sterilizing leaving the membrane unaffected in temperatures up to 135°C (274°F). The exceptional dimensional strength and low binding characteristics of GVS CA Filtration Membranes provides higher throughputs than competitive offerings and reduces the amount of filter changes needed during proteinaceous solution filtering. Its uniform pore size and consistent flow rates ensure reliable performance.

Features & Benefits

- Superior strength: Can withstand aggressive handling or be used with automated equipment without breaking or tearing
- Low extractables: Ensures tests will be clean with consistent results
- Hydrophilic: Wets out rapidly
- Lot-to-lot consistency: Quality checks ensure consistent flow and diffusion rates for dependable results every time
- Nonlysing of cells: Prevents contamination of critical solutions
- Can be autoclaved or steam sterilized

Typical Applications

- Protein and enzyme filtration
- Biological fluid sterilization
- Tissue culture media sterilization
- Cold sterilization

Polyethersulfone (PES) Membrane

ULTRAsep
Polyethersulfone
Membrane

GVS Polyethersulfone (PES) Filtration Membrane is hydrophilic and cast from pure polyethersulfone polymer. It is designed to remove particulates during general filtration and its low protein and drug binding characteristics make it ideally suited for use in life science applications.

Product Uniformity and High Sensitivity Maximize Performance

This strong, microporous film asymmetric membrane is constructed from a high-temperature polyethersulfone polymer that is acid and base resistant. Its strength and durability are advantageous during usage that involves aggressive handling or automated equipment. GVS PES Filtration Membrane is naturally hydrophilic without added wetting agents and has low extractables.

Due to its inherent uniform porosity and controlled pore size, GVS PES Filtration Membrane efficiently removes particulates from solutions during general filtration. Additionally, its low protein and drug binding characteristics maximize recovery of critical drugs used in I.V. therapy, chemotherapy and open-heart surgery.

Features & Benefits

- ◆ Hydrophilic: Eliminates the need for wetting agents that can potentially interfere with analyses
- ◆ Low extractables: Ensures test results will not be compromised by wetting agents or other extractables
- ◆ Low drug and protein binding: Maximizes recovery of critical drugs or proteins
- ◆ Wide range of pore sizes: Pore size range of 0.03 µm to 8.0 µm enables specific pore size selection for given applications
- ◆ Superior burst strength: Protects the integrity of the membrane under high pressure
- ◆ Lot-to-lot consistency: Quality checks, both down and across the membrane, ensure dependable results every time

Typical Applications

- ◆ Protein and enzyme filtration and sterilization
- ◆ Biological fluid filtration and sterilization
- ◆ Pharmaceutical sterilization
- ◆ Environmental water studies

DISC AND SHEET MEMBRANES

Mixed Cellulose Esters (MCE) Membrane

MICRON
NC (MCE)
Membrane Sep

GVS Mixed Cellulose Esters (MCE) Filtration Membrane is an unsupported, hydrophilic membrane. Its rapid flow rate and high throughput make it ideal for use in diagnostic kit manufacturing applications.

Characteristics

- High flow rate: fast filtration rates
- Uniform pore structure: consistent flow and diffusion rates
- Lot-to-lot consistency

Typical Applications

- Aqueous filtration
- Sterility testing
- Gravimetric analysis with ashing technique
- Microbiological and particulate analysis
- Black for food and beverage applications

Consistent Uniformity Improves Control and Performance

GVS MCE Filtration Membranes are composed of a mixture of inert cellulose nitrate and cellulose acetate polymers. The uniform microporous structure of these filters provides the fastest flow rates and highest throughputs available in a membrane filter. Because they are biologically inert, GVS

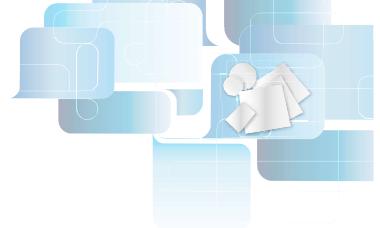

MCE Filtration Membranes are ideal for a wide range of clarification, sterilization and analytical applications such as: microbiological analysis, clarification or sterilization of aqueous solutions, industrial hygiene applications, silt density index and particulate-matter analysis. For gravimetric analysis using ashing techniques, GVS MCE Membranes yield a residue of less than 0.045% of their initial weight. They are hydrophilic with a noncytotoxic wetting agent and yield extractable levels of less than 4% of their weight. These membranes are autoclavable at 121°C (250°F) for 20 minutes. Sterilized product lifetime is 24 months from sterilization date.

DISC AND SHEET MEMBRANES

Nylon 66 (NY) Membrane

MAGNA
Nylon Membrane

Features & Benefits

- Hydrophilic: Eliminates the need for wetting agents that can potentially interfere with biological processes
- Super strength: Eases handling when used with automated equipment
- Low extractables: Ensures tests will be clean and pure leading to more consistent results
- Lot-to-lot consistency: Quality checks ensure lot-to-lot consistency, both down and across the polyester web, for dependable results every time

Description and Use

GVS Nylon Filtration Membrane is a supported, naturally hydrophilic membrane designed to wet out evenly and retain its superior strength during use in general filtration or medical assays.

Versatile Capabilities, Consistent Performance

GVS Nylon Filtration Membrane is internally supported with an inert polyester support web giving it added dimensional strength and stability that prevents cracking, tearing, curling and breaking. This added strength and durability is advantageous during usage that involves aggressive handling or automated equipment.

A naturally hydrophilic membrane, GVS Nylon Filtration Membrane does not require wetting agents that can interfere with biological processes.

Typical Applications

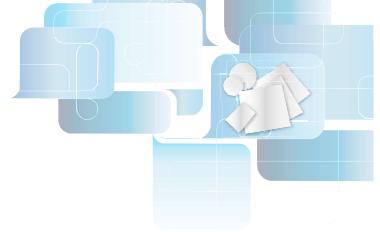

- Sterilization and clarification of aqueous and organic solvent solutions
- HPLC sample preparation

DISC AND SHEET MEMBRANES

Polytetrafluoroethylene (PTFE) Membrane

GVS Laminated PTFE filters are made of a polytetrafluoroethylene polymer (PTFE) laminated to a polypropylene support for improved durability and easy handling. These filters are chemically compatible with strong acids and most aggressive solvents such as alcohols.

PTFE (fine powder resin) is expanded into a 3-dimensional web-like structure called PTFE which creates billions of microscopic pores. This structure utilizes the inherent hydrophobic (water-resistant) and non-stick nature of PTFE to allow removal of particulate captured on the membrane surface. This allows air to pass easily through the membrane while collecting particulate as small as 0.1 micron on its surface. PTFE membranes provide

device manufacturers with a consistent, temperature and chemical compatible barrier to microbes and particulate matter. The optimal combination of air flow and water entry pressure adds value to most device designs.

Inherently hydrophobic, PTFE membranes will not absorb moisture from air or gases, making it ideal for venting applications, phase separations and aerosol samplings.

Laminated PTFE filters can be used to filter aqueous solutions when prewetted with methanol.

They are autoclavable up to 130°C (260°F).

Features & Benefits

- ◆ Naturally hydrophobic
- ◆ Compatible with strong acids and aggressive solutions
- ◆ Improved durability and handling
- ◆ Autoclavable

Typical Applications

- ◆ Filtration of strong acids and aggressive solutions
- ◆ Venting applications
- ◆ Phase separations
- ◆ Aerosol samplings

Regenerated Cellulose (RC) Membrane

GVS Regenerated Cellulose membrane is a hydrophilic high strength media. Regenerated Cellulose filters have a broad solvent compatibility, and they contribute very low extractable material in a wide variety of sample solvents. Thus, they are appropriate for sample preparation in many applications and as a standalone or syringe filter membrane. This membrane media can be sterilized by all common methods keeping a mechanically stability. The superior strength assures an high chemical resistance for usage with a wide range of aqueous and organic media.

Features & Benefits

- ◆ Hydrophilic
- ◆ Excellent chemical compatibility and resistance to organic solvents
- ◆ Low non-specific adsorption
- ◆ Superior thermal resistance
- ◆ High mechanical strength
- ◆ Maximum Operating Temperature 134°C

Typical Applications

- ◆ Filtration of Aqueous and Organic Solutions
- ◆ Particle removal from organic solvents or mixtures of aqueous and non-aqueous samples
- ◆ Ultra-cleaning and de-gassing solvents and mobile phases for HPLC
- ◆ Clarification
- ◆ Protein Chemistry

DISC AND SHEET MEMBRANES

Polyvinylidene Fluoride (PVDF) Hydrophilic Membrane

PVDF
Polyvinylidene
Membrane

Features & Benefits

- ◆ Superior strength to withstand aggressive handling or use with automated equipment without breaking or tearing
- ◆ Low protein binding minimizes retention of proteins in solution
- ◆ Low extractables ensure tests will be clean with consistent results
- ◆ Lot-to-lot consistency ensures consistent flow and diffusion rates for dependable results every time

Typical Applications

- ◆ Sterilizing clarification of biological solutions.
- ◆ Preparation of protein-containing solutions prior to chromatography or other instrumental analyses.
- ◆ Useful for a wide range of applications, including aggressive and non-aggressive solvent-based mobile phase.
- ◆ Offers excellent chemical compatibility, even with aggressive acids and alcohols.
- ◆ Provides high flow rates and throughput, low extractables and broad chemical compatibility.
- ◆ Better protection of your analytical results.

GVS Hydrophilic Polyvinylidene Difluoride (Hydrophilic PVDF) Filtration Membrane is a supported, hydrophilic membrane that exhibits broad chemical compatibility and low protein binding. Composed of PVDF internally supported by an inert polyester web, the resulting membrane has dimensional stability. This provides higher throughputs than competitor offerings and reduces the amount of filter changes needed during filtration. It is ideal for use in filtration applications of biological solutions. This hydrophilic membrane has a great thermal stability with maximum operating temperature of 175°F and it is autoclavable.

Polypropylene (PP) Membrane

column life. GVS polypropylene filter is the preferred filter membrane for HPLC applications where the detection levels are below 230 nm. The filters also exhibit negligible protein binding which, is essential for maximum sample recovery of critical, small volume protein samples.

Features & Benefits

- ◆ Broad chemical compatibility
- ◆ Hydrophobic
- ◆ HPLC applications - detection levels < 230 nm

Typical Applications

- ◆ Aqueous and organic solvent filtration
- ◆ HPLC sample preparation requiring low detection levels
- ◆ Ion chromatography
- ◆ Total digest for heavy metals

GVS polypropylene filtration membranes are composed of pure polypropylene with absolute pore size ratings. These filters offer broad chemical compatibility allowing its use with aqueous and organic solvent samples.

The polypropylene filter has extremely low extractable levels designed to provide accurate, consistent analysis results for sensitive ion chromatography applications while prolonging

DISC AND SHEET MEMBRANES

Polycarbonate Track Etched (PCTE) Membrane

GVS Polycarbonate Track Etched (PCTE) Membrane is made from a thin polycarbonate film with precisely defined pores. It is ideally suited for use in cellular-based filtration assays as well as filtration applications where high purity is required. The membrane is produced through a two-step, proprietary manufacturing process that employs high quality standards. In the first step, polycarbonate film is exposed to ion particles that pass through it. As the ions pass through the film, they create "tracks" where the polymer is damaged. The beamed film is then exposed to a chemical that etches out the tracks creating precise, cylindrical pores. Pore density is controlled by the number of tracks per unit area, and pore size is controlled by varying the temperature, strength and time of exposure to the etching solution. This unique process allows for increased control over pore size and density to ensure the physical properties of each membrane precisely fit your specifications. The resulting membrane is a thin, translucent polycarbonate film with a smooth, flat surface. All particles larger than the pore size are captured on its surface.

GVS offers a unique solution for Legionella analysis following the new standard UNI EN ISO 11731. Our sterile gridded membranes are suitable for this test and give you the best performances.

GVS offers the PCTE Membrane for AOX use (adsorbable organic halogens) with exceptionally low protein-binding/extractable levels and precisely defined pores. These AOX-certified polycarbonate (PCTE) membranes are ideally suited for the detection of man-made pollution in groundwater and wastewater (organic halide adsorption determination).

To optimize the suitability of PCTE, we offer a variety of products with unique characteristics:

- ◆ PVP (polyvinylpyrrolidone)-treated for a hydrophilic membrane
- ◆ AOX-certified for applications requiring extremely low extractables
- ◆ Black-dyed membrane for staining applications
- ◆ PVP-free for a hydrophobic membrane

Characteristics

- ◆ Absolute pore size and density allows for precise size separation
- ◆ Direct thickness and pore size measurements provide accurate characteristics
- ◆ Smooth, thin, glass-like surface is suitable for microscopy and cellular applications
- ◆ Superior strength allows for aggressive handling
- ◆ Low protein binding ensures clean results
- ◆ Resists chemical staining to ease microscopic visualization
- ◆ Passes USP VI Class toxicity testing for use

Typical Applications

- ◆ General filtration
- ◆ Legionella test (UNI EN ISO 11731_2017)
- ◆ Removal of red blood cells from plasma
- ◆ Flow control of reagents through assays
- ◆ Precise filtration and prefiltration
- ◆ Fuel testing
- ◆ Cytology
- ◆ Microscopy

Product Characteristics

Thickness	5 - 20 µm	Sterilization	Gamma Irradiation or Ethylene Oxide (EtO)
Refractive Indices	Birefringent at 1.584 and 1.625	USP Class VI Testing	Passed
Water Adsorption (% wt. gain 24-hr immersion)	0,24%	Extractables	Very Low
Residual Ash Weight Average	0.92 µg/cm ²	BSA Protein Binding	5 µg/cm ²
Specific Gravity	0.94-0.97	Maximum Operating Temperature	284°F (140°C)
Autoclavable	Yes	Sealing Compatibility	Ultrasonic, Heat, Radio Frequency and Insert Molding
Leachables	Negligible	Pore Size Range	0.05 to 20 µm
Wetting Characteristics	Hydrophilic or Hydrophobic		
Wetting Agent (hydrophilic)	Polyvinylpyrrolidone (PVP)		
Burst Strength Minimum	0.7 bar (10 psi)		
Migration of Filter Media	0		
Optical Properties	Semi-translucent

DISC AND SHEET MEMBRANES

Polyester Track Etched (PETE) Membrane

GVS PETE Membrane is made from a thin polyester film with a high density of solvent resistance. It is ideal for use in blood assays or general filtration where chemically aggressive solvents may be used. The membrane is produced through a two-step proprietary manufacturing process similar to that of the PCTE membrane. In the first step, polyester film is exposed to ion particles that pass through the film. As the ions pass through the film, they create "tracks" where the polymer is damaged. The beamed film is then exposed to a chemical solution which etches out the tracks creating precise, cylindrical pores. Pore density is controlled by the number of tracks per unit area, and pore size is controlled by varying the temperature, strength and time of exposure to the etching solution. This unique process allows for increased control over pore size and density to ensure the physical properties of each membrane precisely fit your specifications. The resulting membrane is a thin, translucent

polyester film with a smooth, flat surface containing pores of controlled diameter and number. The membrane has better solvent resistance than polycarbonate and captures all particles larger than the precisely controlled pore size on its surface.

Characteristics

- ◆ Broad range of chemical compatibility for a wide range of applications
- ◆ Direct thickness and pore size measurements ensure accurate characteristics
- ◆ Naturally hydrophilic so pre-treatments and wetting agents are not required
- ◆ Smooth, thin, glass-like surface for microscopic visualization
- ◆ Low protein binding ensures clean results

Typical Applications

- ◆ General filtration
- ◆ Removal of red blood cells from plasma
- ◆ Flow control of reagents through assays
- ◆ Precise filtration and prefiltration
- ◆ Air analysis
- ◆ Filtration of aggressive solutions
- ◆ Cellular assays and diagnostics
- ◆ Trace element analysis

Nominal Product Characteristics

Water Adsorption (% wt. gain 24-hr immersion)	0.24%
Residual Ash Weight Average	0.92 µg/cm ²
Specific Gravity	0.94-0.97
Autoclavable	Yes
Leachables	Negligible
Wetting Characteristics	Naturally Hydrophilic
Burst Strength Minimum	0.7 bar (10 psi)
Migration of Filter Media	0
Optical Properties	Semi-translucent

Product Characteristics

Sterilization	Gamma Irradiation or Ethylene Oxide (EtO)
USP Class VI Testing	Passed
Thickness	10 - 20 µm
Extractables	Low
BSA Protein Binding	< 5 µg/cm ²
Maximum Operating Temperature	284°F (140°C)
Sealing Compatibility	Ultrasonic, Heat, Radio Frequency and Insert Molding
Pore Size Range	0.2 to 10 µm

Drain Disc

The polyester spun-bonded "drain" type disc prevents "pore blinding" or blockage of the capillary pores in screen membranes resulting in higher flow rates and increased throughputs. The drain disc increases flow and capture ability by lifting off of screen supports and exposing all the pores. This ensures efficient performance when placed between two filters in a serial filtration stack. The spacers prevent air locking of the downstream screen, or function as filters by binding a percentage of pores in the upstream filter. The spacer may be sized to fit within the diameter of the O-ring in the filter holder. For example , use a 42 mm spacer under a 47 mm filter.

Characteristics

- ◆ Frequently used with PCTE (Polycarbonate) and PETE (Polyester) membranes to increase flow
- ◆ Spacer between stacked membranes

DISC AND SHEET MEMBRANES

Filter Papers

GVS filter paper is the standard for laboratory filtration. Using the highest quality material, the GVS filter paper has an enhanced mechanical strengths, quality level and reliability. GVS offers both qualitative and quantitative filter papers, with increasing degrees of purity, hardness and chemical resistance.

Qualitative Papers

GVS Qualitative low ash hardened filter paper is used in qualitative analytical techniques to determine and identify materials. Qualitative filter papers are made of refined pulp and pure cotton linters with an alpha-cellulose content of nearly 100%. The ash content of less than 0.06% is not reduced by post-treatment. From Very Fast filtration to Very Slow filtration, GVS qualitative Papers provide a wide range of solutions for all application needs.

Low Ash / Very Fast

Very high rate of filtration with excellent retention of coarse particles and precipitates such as metal hydroxides and sulphides or gelatinous substances. Rapid filter for clean-up of biological fluids or organic extracts, food industry analysis and air pollution monitoring.

Product Characteristics

Weight	85 g/m ²
Thickness	210 µm
Retention Range	15-20 µm
Ash content	<0.06 %

General Application

- ◆ Qualitative analysis
- ◆ Analysis of Biological and organic fluids
- ◆ Air monitoring
- ◆ Food analysis

FILTER PAPERS

Low Ash / Medium

Medium retention and flow rate. For the rapid filtration of fine precipitates.

Medium grade filter paper is ideal for a wide range of laboratory applications: separation of precipitates (lead sulfate, calcium oxalate, calcium carbonate), soil analysis, seed testing, separation of solid foodstuff or extracting liquid, atmospheric dust collection, gas detection.

Product Characteristics

Weight	85 g/m ²
Thickness	180 µm

DISC AND SHEET MEMBRANES

Low Ash / Medium-Slow/Thick

Double thick filter paper with Medium-Slow flow speed with medium-high retention. The extra thickness provides greater wet strength for higher solute loading. Suitable for Buchner funnels and hard to clarify liquids, essences, oils and tinctures. For the filtration of fine particles.

Product Characteristics

Weight	200 g/m ²
Thickness	320 µm
Retention Range	5-7 µm
Ash content	<0.06 %

General Application

- ◆ Qualitative analysis
- ◆ Buchner funnels

Low Ash / Very Slow

Maximum particle retention. Slow flow rate. High retention of fine particles in chemical analysis. Clarification of cloudy suspensions (wine); Water and soil analysis. Ideal for extra fine-grained precipitates, barium sulphate, cuprous oxide.

Product Characteristics

Weight	85 g/m ²
Thickness	170 µm
Retention Range	3-5 µm
Ash content	<0.06 %

General Application

- ◆ Qualitative analysis
- ◆ Clarifying liquids
- ◆ Water analysis
- ◆ Soil analysis

FILTER PAPERS

Quantitative Papers

GVS Quantitative Ashless filter papers are designed for quantitative analysis and preparation of samples and gravimetric analysis. Suitable for Buchner funnels and filtration under pressure. Quantitative Ashless filter papers are made of refined pulp and pure cotton linters with an alpha-cellulose content of virtually 100%. Ash content of less than 0.007%. From Very Fast Filtration to Very Slow Filtration, the wide range of GVS Quantitative Papers provide the right solution for any application need.

Ashless / Fast

Very fast ashless filter paper. Analytical procedures with large particles or gelatinous precipitates (iron or aluminum hydroxides). Air pollution analysis to determinate gaseous compounds.

Product Characteristics

Weight	85 g/m ²
Thickness	190 µm
Retention Range	20-25 µm
Ash content	<0.007 %

General Application

- ◆ Quantitative analysis
- ◆ Air monitoring
- ◆ Food industry
- ◆ paper industry

Ashless / Medium

Medium retention and fast flow. Foodstuff and soil analysis. Air pollution monitoring. Analysis in mining, construction and steel industries.

Product Characteristics

Weight	85 g/m ²
Thickness	180 µm
Retention Range	14-17 µm
Ash content	<0,007 %

General Application

- ◆ Quantitative analysis
- ◆ Food analysis
- ◆ Soil analysis
- ◆ Industrial analysis
- ◆ COD and TOC determination
- ◆ inorganic analysis
- ◆ Blaine test and other cement testing
- ◆ Inorganic

DISC AND SHEET MEMBRANES

Ashless / Medium-Slow

Medium speed and retention. Analysis of components in cements, clays, iron and steel products. Soil analysis. Sediments in milk. Filtration of solutions prior to atomic absorption spectrophotometry; High purity filter in atmospheric analysis.

Product Characteristics	
Weight	85 g/m ²
Thickness	170 µm
Retention Range	7-9 µm
Ash content	<0.007 %

General Application

- ◆ Quantitative analysis
- ◆ Gravimetric analysis
- ◆ Soil analysis
- ◆ Air monitoring
- ◆ Fat and oil in water testing

Ashless / Slow

High retention and slow flow rate. Often used for filtering very fine precipitates and in gravimetric metal determination.

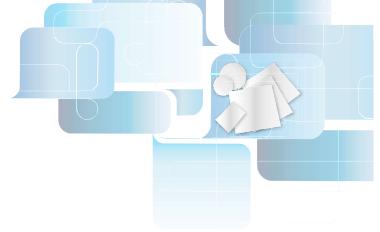

Product Characteristics	
Weight	85 g/m ²
Thickness	160 µm
Retention Range	2-4 µm
Ash content	<0.007 %

General Application:

- ◆ Quantitative analysis
- ◆ For very fine crystalline precipitates

Ashless / Very Slow

Highest retention and very slow flow. Extremely difficult filtrations. Analytical precipitates: barium sulphate, metastannic acid and finely precipitated calcium carbonate. The ideal filter paper for critical gravimetric analysis.

Product Characteristics

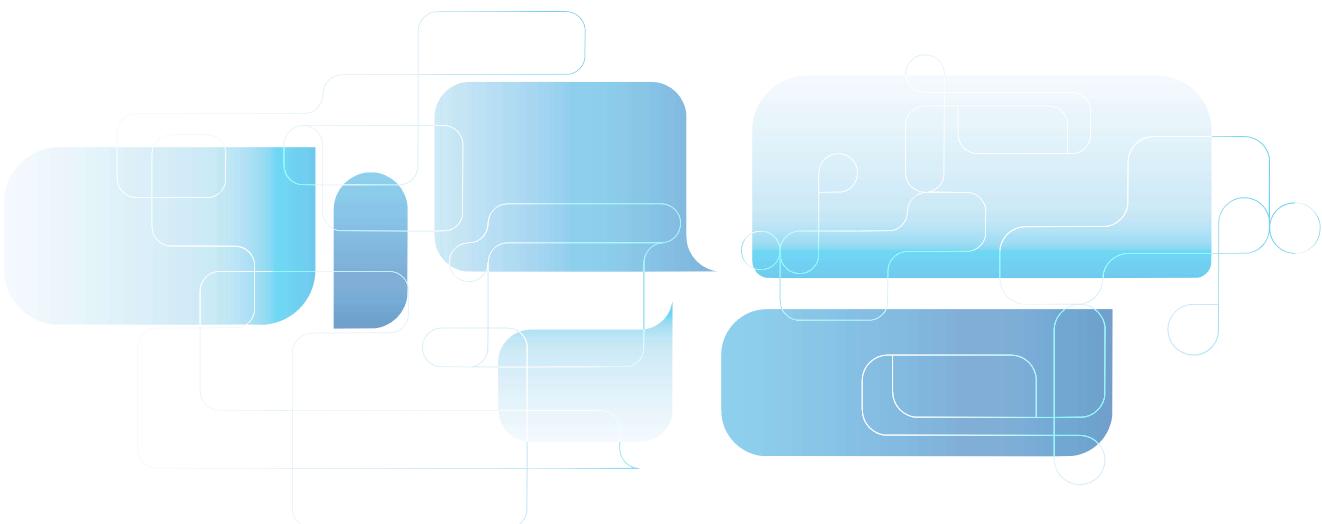

Weight	100 g/m ²
Thickness	160 µm
Retention Range	2-3 µm
Ash content	<0,007 %

General Application

- ◆ Quantitative analysis
- ◆ Critical gravimetric analysis.

DISC AND SHEET MEMBRANES

Glass Microfiber

GF 0.7 µm

This is the filter with the highest retention performance of the range. It is particularly suited to filter samples and solvents for HPLC, being this pre-filtration most important for ensuring the success of the test. It is also suitable for biochemical test, such as clarifications, protein filtrations, cellular cultures, etc. The Trace Element Levels were obtained with an AAS (Atomic Absorption Spectrometer) with 100% dissolved fiberglass.

Product Characteristics

Basis Weight	75 g/m ²
Thickness	450 µm
Retention range	0.7 µm
Binders	Binder-free
Retention DOP	99,998 %

GVS offers a wide range of glass microfiber filters made of 100% borosilicate glass fibers without binders. The depth structure of the filter with its large surface area provides an outstanding impurity retention capacity combined with a low filter resistance. Glass fiber filters adsorb the finest particles down to 1 µm from liquids and < 1 µm in air and gases, as the electrostatic interaction between the glass fibers and gases is better than between glass fibers and liquids.

Features & Benefits

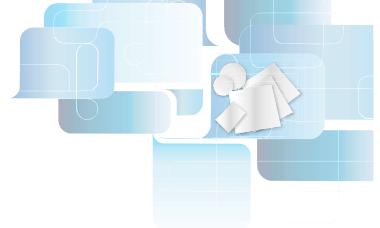

- Very small particles retention
- Resistance to aggressive substances
- Temperature resistant up to 500°C

Typical Application

- DNA and Protein filtration
- Clarification
- Water analysis
- Biochemical determinations
- Air monitoring
- As a membrane pre-filter
- Filtration of solvents for HPLC and biochemical tests
- Cell cultures
- Protein and Enzyme filtration

FILTER PAPERS

GF 1.0 µm

This filter paper is mainly used in membrane prefiltration and for filtration of suspended solids in water.

Suitable for filtration of large volumes.

Features & Benefits

- ◆ Small particles retention
- ◆ Resistance to aggressive substances
- ◆ Temperatures up to 500 °C

Product Characteristics

Basis Weight	143 g/m ²
Thickness	700 µm
Retention range	1.0 µm
Binders	Binder-free
Retention DOP	99,998 %

Typical Application

- ◆ Liquid Filtration
- ◆ Clarification
- ◆ Water analysis
- ◆ Biochemical determinations
- ◆ As a membrane pre-filter
- ◆ Large volume filtration

DISC AND SHEET MEMBRANES

GF 1.2 µm

This is the most suitable filter to test for solids in suspension in water in accordance with the parameters set by the EN European regulations. In general it is suitable for any work in water control or waste water analysis, including clarification processes. In biochemical tests, it is very useful for analysing carbohydrates, cellular cultures, etc. The Trace Element Levels were obtained with an AAS (Atomic Absorption Spectrometer) with 100% dissolved fiberglass.

Product Characteristics

Basis Weight	53 g/m ²
Thickness	260 µm
Retention range	1.2 µm
Binders	Binder-free
Retention DOP	99,998 %

Features & Benefits

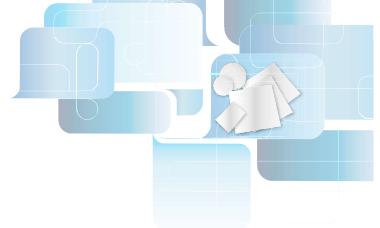

- ◆ Extraction thimbles (cellulose, glass & quartz microfiber)
- ◆ Very small particles retention
- ◆ Resistance to aggressive substances
- ◆ Temperatures up to 500 °C

Typical Application

- ◆ DNA and Protein filtration
- ◆ Clarification
- ◆ Water analysis
- ◆ Biochemical determinations
- ◆ Air monitoring
- ◆ As a membrane pre-filter
- ◆ Filtration of solvents for HPLC and biochemical tests

FILTER PAPERS

GF 1.6 µm

Particularly suited to atmospheric pollution controls, intake controls and ozone level measurements. This product is used in testing for algae in water, in general water controls and in waste water analysis. Its use for filtering solvents in high-resolution laboratories is recommended.

Features & Benefits

- ◆ Extraction thimbles (cellulose, glass & quartz microfiber)
- ◆ Very small particles retention
- ◆ Resistance to aggressive substances
- ◆ Temperatures up to 500 °C
- ◆ Fine retention with fast flow

Product Characteristics

Basis Weight	52 g/m ²
Thickness	260 µm
Retention range	1.6 µm
Binders	Binder-free
Retention DOP	99,998 %

Typical Application

- ◆ General purpose laboratory filtration
- ◆ Food analysis
- ◆ Water analysis
- ◆ Biochemical determinations
- ◆ Air monitoring
- ◆ As a membrane pre-filter
- ◆ Protein filtration

DISC AND SHEET MEMBRANES

GF 2.7 µm

A coarse filter commonly used for membrane pre-filtering. Has a high particle retention for pre-filtering to ensure that the sample is clarified properly prior to passing through the membrane filter.

Features & Benefits

- Coarse particles retention
- Resistance to aggressive substances
- Temperatures up to 500 °C
- Coarse retention with fast flow

Product Characteristics

Basis Weight	120 g/m ²
Thickness	530 µm
Retention range	2.7 µm
Binders	Binder-free
Retention DOP	99,998 %

Typical Application

- General purpose laboratory filtration
- Clarification
- As a membrane pre-filter
